- Inspiring Sustainable *Service Delivery* by our Municipalities -

- Inspiring Sustainable *Service Delivery* by our Municipalities -

Municipalities are custodians of tangible and high value assets such as **roads and stormwater systems, waste disposal sites, water and sanitation systems, electricity reticulation and public facilities.**

These assets must be appropriately and adequately managed from a holistic life-cycle point of view i.e. not accounted for compliances purposes only, but to ensure realisation of their full potential in an effective, efficient and economical manner.

This will further ensure that municipal services are sustainable and not prone to abrupt service disruptions due to asset failures that could have been avoided through proactive planning and maintenance of the respective asset/s in question.

Dr Emmanuel Ngcobo
(Chairperson: CMAM – South Africa)

Monday, 18 March 2024 **Day 01:**
Registration | Municipal Infrastructure Tour
[12pm to 4pm]

“Realising **Municipal Integration** in Management of Assets for **Sustainable Service Delivery**”
